Overview

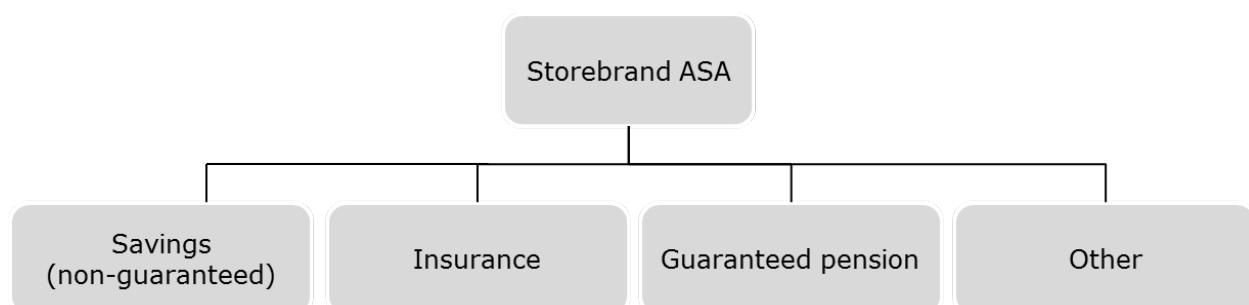

Storebrand is the leading provider of life insurance and pensions in the Nordic region. The group provides both guaranteed and non-guaranteed savings, as well as insurance, to retail customers, corporate customers, municipalities and to the public sector.

Reporting and legal structure

Storebrand's reporting structure deviates from the legal structure. The main lines in the reporting structure are shown below. The supplementary information is structured around Savings (non-guaranteed), Guaranteed pension, Insurance and Other.

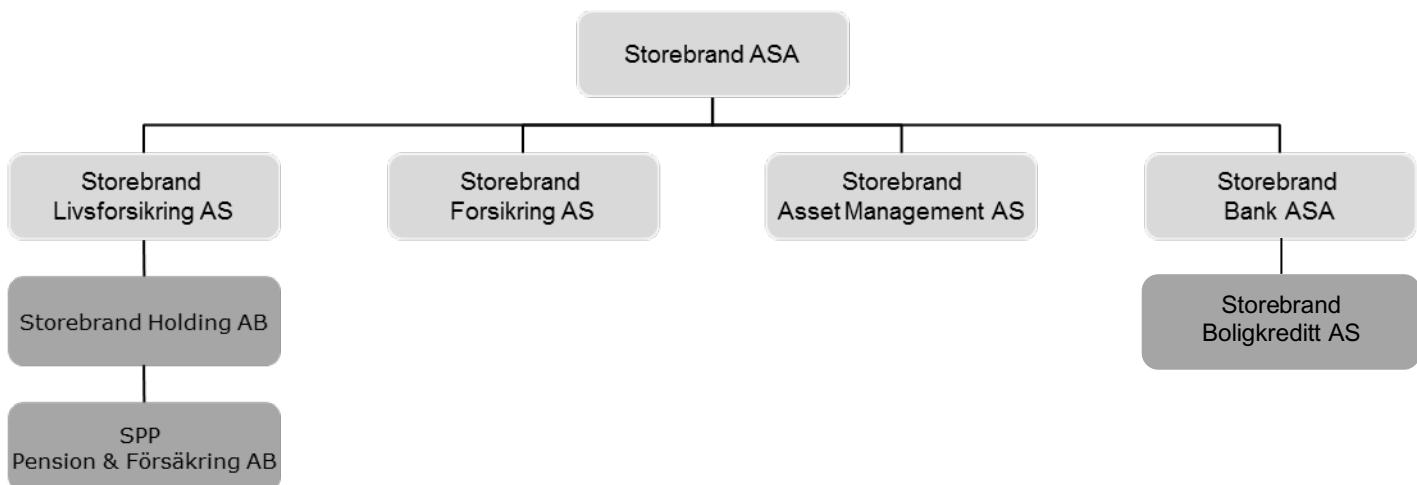

Storebrand consists of a number of legal entities. Profit and Balance sheet of these legal entities can be found in the last part of this document. Separate interim reports for Storebrand Livsforsikring AS and Storebrand Bank ASA can also be downloaded at www.storebrand.com/ir.

Insurance

Insurance is an operational and reporting unit consisting of Storebrand Forsikring AS, Storebrand Helseforsikring AS and the majority of risk products written within life and pension in Norway (Storebrand Livsforsikring AS), with the exception of risk coverage bundled to the guaranteed life products.

Insurance offers standard property and casualty insurance products, one-year risk products and health insurance in the Norwegian retail market and workers' compensation and group life insurance for the corporate market.

Sensitivities Sweden - guaranteed portfolio financial result

Excluding potential indexation fee in the defined benefit portfolio and effect of the macro model used to discount liabilities (see description below).

The sensitivities shown below are based on internal risk modelling. The sensitivities are a point in time estimate on the risk associated with market movements in the disclosed markets factors. Important assumptions behind the sensitivities are amongst others instantaneous change in the disclosed market factors and change in one market factor at a time.

The financial result may vary significantly from what the sensitivities indicate throughout a period based on amongst others: management action based on market movements throughout the period, several market factors moving simultaneously and indexes not giving a precise approximation of actual investment portfolio. For example the credit portfolio is constructed to be robust versus the liabilities and has a low correlation to ITRAXX. The Interest rate sensitivity is based on a parallel shift in the interest rate curve.

The insurance liabilities are valued using a macro extrapolation model for interest rates. In the current interest rate environment long dated interest rates are lower than the discount rate used in the macro model. This is estimated to give a negative result contribution of approximately MNOK 50 pr. quarter at the current Swedish interest rate level. Note that the estimate is based on internal actuarial and market assumptions and that the actual result contribution from this element will vary.
